## Thomas Jefferson and his Decimals 1775-1810: Neglected Years in the History of U.S. School Mathematics

M. A. Ken Clements, Nerida F. Ellerton

This well-illustrated book, by two established historians of school mathematics, documents Thomas Jefferson's quest, after 1775, to introduce a form of decimal currency to the fledgling United States of America. The book describes a remarkable study showing how the United States' decision to adopt a fully decimalized, carefully conceived national currency ultimately had a profound effect on U.S. school mathematics curricula.

The book shows, by analyzing a large set of arithmetic textbooks and an even larger set of handwritten cyphering books, that although most eighteenth- and nineteenth-century authors of arithmetic textbooks included sections on vulgar and decimal fractions, most school students who prepared cyphering books did not study either vulgar or decimal fractions. In other words, author-intended school arithmetic curricula were not matched by teacher-implemented school arithmetic curricula. Amazingly, that state of affairs continued even after the U.S. Mint began minting dollars, cents and dimes in the 1790s. In U.S. schools between 1775 and 1810 it was often the case that Federal money was studied but decimal fractions were not. That gradually changed during the first century of the formal existence of the United States of America. By contrast, Chapter 6 reports a comparative analysis of data showing that in Great Britain only a minority of eighteenth- and nineteenth-century school students studied decimal fractions. Clements and Ellerton argue that Jefferson's success in establishing a system of decimalized Federal money had educationally significant effects on implemented school arithmetic curricula in the United States of America.

The lens through which Clements and Ellerton have analyzed their large data sets has been the lag-time theoretical position which they have developed. That theory posits that the time between when an important mathematical "discovery" is made (or a concept is "created") and when that discovery (or concept) becomes an important part of school mathematics is dependent on mathematical, social, political and economic factors. Thus, lag time varies from region to region, and from nation to nation.

Clements and Ellerton are the first to identify the years after 1775 as the dawn of a new day in U.S. school mathematics?traditionally, historians have argued that nothing in U.S. school mathematics was worthy of serious study until the 1820s. This book emphasizes the importance of the acceptance of decimal currency so far as school mathematics is concerned. It also draws attention to the consequences for school mathematics of the conscious decision of the U.S. Congress not to proceed with Thomas Jefferson's grand scheme for a system of decimalized weights and measures.

**From reader reviews:**

**Mary Conley:**

Information is provisions for people to get better life, information these days can get by anyone with everywhere. The information can be a expertise or any news even a problem. What people must be consider whenever those information which is in the former life are challenging be find than now could be taking seriously which one is appropriate to believe or which one often the resource are convinced. If you obtain the unstable resource then you understand it as your main information we will see huge disadvantage for you. All those possibilities will not happen within you if you take Thomas Jefferson and his Decimals 1775-1810: Neglected Years in the History of U.S. School Mathematics as your daily resource information.

**Robert Younger:**

Spent a free the perfect time to be fun activity to complete! A lot of people spent their down time with their family, or all their friends. Usually they performing activity like watching television, going to beach, or picnic inside the park. They actually doing same task every week. Do you feel it? Will you something different to fill your own free time/ holiday? Can be reading a book may be option to fill your totally free time/ holiday. The first thing you ask may be what kinds of e-book that you should read. If you want to consider look for book, may be the book untitled Thomas Jefferson and his Decimals 1775-1810: Neglected Years in the History of U.S. School Mathematics can be great book to read. May be it could be best activity to you.

**Andres Edelman:**

As a student exactly feel bored to reading. If their teacher inquired them to go to the library or even make summary for some book, they are complained. Just very little students that has reading's soul or real their hobby. They just do what the trainer want, like asked to go to the library. They go to presently there but nothing reading very seriously. Any students feel that reading is not important, boring as well as can't see colorful photos on there. Yeah, it is to become complicated. Book is very important for you personally. As we know that on this period, many ways to get whatever we would like. Likewise word says, ways to reach Chinese's country. Therefore , this Thomas Jefferson and his Decimals 1775-1810: Neglected Years in the History of U.S. School Mathematics can make you sense more interested to read.

**Joan Beverly:**

What is your hobby? Have you heard that question when you got learners? We believe that that problem was given by teacher with their students. Many kinds of hobby, Everyone has different hobby. And you know that little person including reading or as reading through become their hobby. You need to know that reading is very important in addition to book as to be the factor. Book is important thing to provide you knowledge, except your own teacher or lecturer. You discover good news or update about something by book. Numerous books that can you take to be your object. One of them is actually Thomas Jefferson and his Decimals 1775-

1810: Neglected Years in the History of U.S. School Mathematics.
