**Gold Catalysis: An Homogeneous Approach (Catalytic Science Series)** F Dean Toste, Veronique Michelet

Research on designing new catalytic systems has been one of the most important fields in modern organic chemistry. One reason for this is the predominant contribution of catalysis to the concepts of atom economy and green chemistry in the 21st century. Gold, considered catalytically inactive for a long time, is now a fascinating partner of modern chemistry, as scientists such as Bond, Teles, Haruta, Hutchings, Ito and Hayashi opened new perspectives for the whole synthetic chemist community. This book presents the major advances in homogeneous catalysis, emphasizing the methodologies that create carbon carbon and carbon heteroatom bonds, the applications that create diversity and synthesize natural products, and the recent advances and challenges in asymmetric catalysis and computational research.

It provides readers with in-depth information about homogeneous gold-catalyzed reactions and presents several explanations for the scientific design of a catalyst. Readers will be able to understand the entire gold area and find solutions to problems in catalysis.

*Gold Catalysis — An Homogeneous Approach* is part of the *Catalytic Science Series* and features prominent authors who are experts in their respective fields.

Readership: Graduate students and researchers in organic chemistry.

### **From reader reviews:**

#### **Clarence McKeever:**

Nowadays reading books be than want or need but also work as a life style. This reading habit give you lot of advantages. The benefits you got of course the knowledge the rest of the information inside the book that will improve your knowledge and information. The knowledge you get based on what kind of book you read, if you want send more knowledge just go with education and learning books but if you want really feel happy read one along with theme for entertaining for example comic or novel. The particular Gold Catalysis: An Homogeneous Approach (Catalytic Science Series) is kind of e-book which is giving the reader erratic experience.

#### **Kelly Gomes:**

Reading a guide can be one of a lot of activity that everyone in the world loves. Do you like reading book consequently. There are a lot of reasons why people fantastic. First reading a guide will give you a lot of new info. When you read a book you will get new information because book is one of various ways to share the information or maybe their idea. Second, reading through a book will make an individual more imaginative. When you reading through a book especially fictional works book the author will bring one to imagine the story how the personas do it anything. Third, you could share your knowledge to other folks. When you read this Gold Catalysis: An Homogeneous Approach (Catalytic Science Series), it is possible to tells your family, friends in addition to soon about yours guide. Your knowledge can inspire average, make them reading a guide.

#### **Barbara Wheat:**

Playing with family in a park, coming to see the ocean world or hanging out with friends is thing that usually you could have done when you have spare time, then why you don't try factor that really opposite from that. One activity that make you not experience tired but still relaxing, trilling like on roller coaster you already been ride on and with addition of knowledge. Even you love Gold Catalysis: An Homogeneous Approach (Catalytic Science Series), you could enjoy both. It is great combination right, you still need to miss it? What kind of hang-out type is it? Oh can occur its mind hangout fellas. What? Still don't have it, oh come on its called reading friends.

#### **Ronald Sadowski:**

Is it a person who having spare time in that case spend it whole day by simply watching television programs or just telling lies on the bed? Do you need something new? This Gold Catalysis: An Homogeneous Approach (Catalytic Science Series) can be the answer, oh how comes? A book you know. You are thus out of date, spending your time by reading in this brand new era is common not a nerd activity. So what these books have than the others?
